

HOOSICK STREET PHASE II CORRIDOR STUDY

Corridor Concept for Hoosick Street in the City of Troy, New York.

Total Study Cost: \$80,000 consultant effort

Description: The objective of this study is to develop a plan that addresses the land use and transportation strategies identified in an earlier Hoosick Street Corridor Study on a nearly site by site basis throughout the corridor. This will provide a greater level of detail than the original corridor study which identified strategies for three generalized planning areas. The plan will validate the feasibility of the identified transportation improvements and implement land use controls to facilitate and complement them. It will also provide Troy with the necessary guidance to ensure that developers and potential redevelopers are aware of the recommended strategies for the corridor and that they are implemented in a coherent manner.

This study was completed in December 2004.
