Changes to 2010-15 Transit Project Listings

TIP Appendix A – Transit Project Details

The Appendix A sent in the Planning Committee mailout for the May 5, 2010 meeting is being replaced by a newer version emailed to the Committee. This new Appendix A has updates not included in the TIP project listings. These updates are detailed below. None of them are included in the project listings mailed to the Planning Committee in the mailout, but do appear in the most up-to-date project listings on the CDTC web site. They all require Planning Committee approval to remain in the 2010-15 project listings.

T16, Transit Support Vehicles: The funding for this project included a decimal point error. The funding showed as $2.0M per year. It should be $0.2M per year.

T83, Alternative Fuel Retrofit: The Section 5307 funding for this project was moved from the first year to the committed column. CDTA also proposes moving the CMAQ funds from the second year to the first year. The CMAQ proposal will be entertained in the discussion on CMAQ fiscal constraint, and does not show in the project listings.

Other Changes to Transit Project Listings

T11, Passenger Facility Improvements: This project is funded partially with the 1% Section 5307 Enhancement funds. The amount of these funds was recently recalculated, resulting in minor differences by year, but no cumulative difference to the five-year program.

T57, Preventive Maintenance: The funding for this project is the total of remaining Section 5307 funds after all other projects are funded. The Section 5307 funding availability was fine-tuned. This changed the available funding for this project, which was then included in the 2010-15 project listings included in the mailout. The funding for this project was then readjusted after the correction to T16 above, which was included on the web site, but not in the mailout.
